Summary

Applied behavioral scientist with a decade of research on political judgment, public opinion, and polarization. Most recently directed research at Sandbox, a civic technology start-up for cross-partisan dialogue, finding overlooked consensus and spearheading feature development. Previously directed a $3.4 million grant portfolio at ASU and built program evaluation infrastructure at UCI. NSF Graduate Research Fellow with 17 peer-reviewed articles (~1,600 citations) and op-eds in *Scientific American* and *USA Today*. Work covered in *The New York Times*, *Harvard Business Review*, and *The Economist*, and discussed on the floor of the Arizona State Senate.

Positions

Research Director 2025 – 2026
Sandbox

- Led research for a dialogue platform hosting 8,800+ conversations, 73% across political lines.
- Served on the leadership team with the two co-founders; helped define the theory of change, contributed to product and hiring decisions, and directed editorial and engineering staff.
- Analyzed in-app survey and text data to find unexpected cross-partisan agreement; published 12 summaries for general audiences.
- Designed and shipped a model sorting users into opinion groups by argument ratings; wrote the specs, tested engineers' builds against them, and validated the model against known positions.
- Set evaluation criteria that caught opinion groups growing too similar after launch; traced it to narrowed source inputs rather than the model and led editorial and engineering through the fix.
- Designed a human-in-the-loop Claude API pipeline that turns news and op-eds into survey items and daily content, with automated quality and balance checks; wrote the specs and draft code.
- Diagnosed a construct-validity problem in a core rating scale that conflated agreement, comprehension, and moral judgment; redesigned it and shipped the new measure in-app.
- Interviewed current, lapsed, and prospective users to scope a major redesign; translated an Ohio State team's research needs into in-app data collection, delivered during a concurrent update.

Research Director; Humility in Inquiry Project 2023 – 2025
School of Historical, Philosophical, and Religious Studies
Arizona State University

- Led research for a $3.4M John Templeton Foundation project whose teams produced 50+ papers across philosophy, psychology, and sociology; supervised 9 researchers and 5 consultants.
- Directed 30+ studies (15k+ participants) of how social and political factors shape judgments of evidence and expertise, using experimental, longitudinal, multilevel, and profile methods in R.
- Built funder pitch decks and co-authored 7 grant proposals (1 funded, as Co-PI); evaluated proposals and administered ~$1.2M in awards to 7 external teams as their primary contact.
- Organized workshops for the 7 teams and a 100+ person capstone; co-edited *Humble Inquiry* (Cambridge University Press, in press), helping commission 15 contributors across 5 disciplines.

- Co-authored 6 epistemology papers (3 published) on bias, peer review, scientific consensus, and expertise.
- Wrote and managed IRB protocols for multi-site research collaborations.

Academic Program Analyst & Postdoctoral Scholar 2022 – 2023
Center for Assessment and Applied Research
University of California, Irvine

- Built evaluation infrastructure from scratch for 100+ graduate programs ahead of a successful accreditation review; piloted the review process, then approved for university-wide rollout.
- Advised 4 departments on survey design, data collection, and data management, and ran user research with faculty and staff to guide a redesign of 150+ pages of evaluation resources.

Graduate Student Researcher (Summer Appointment) 2020
Graduate Division
University of California, Irvine

- As sole researcher, designed and fielded a campus-wide COVID-19 needs assessment of graduate students; findings guided how the Division targeted support toward underserved schools.

Graduate Researcher 2016 – 2022
Department of Psychological Science
University of California, Irvine

- NSF Graduate Research Fellow; designed and ran 50+ experimental and survey studies (30k+ participants) on partisan bias, moral judgment, and scientific evidence, with open data and code.
- Dissertation (*JPSP*) used blinding to benchmark impartial political judgment, estimating how much partisans' prior beliefs and preferences each drive bias; advanced a ~50-year debate.
- Led an analysis of 99,000+ moral foundations responses showing that data-driven moral profiles explained 7–18 times more variance than self-reported ideology (manuscript in preparation).
- Led focus groups and a university-wide survey that guided graduate-government advocacy strategy.
- Mentored 9 undergraduate, post-baccalaureate, and graduate researchers, two of whom won competitive research awards; received 2 mentorship awards.
